

Metro Ticket Booking Digitization

Requirement Analysis Phase

Date	
Team ID	
Project Name	Smart Metro Ticket Booking System
Maximum Marks	4 Marks

1. Customer Journey Map

This document traces the complete experience of a metro commuter booking a ticket through the digitized ServiceNow platform, from the moment they discover the option to the feedback they leave after travelling. Each touchpoint is examined for user actions, emotional reaction, the shortcomings of today's manual, paper-based process, and the opening the digital solution creates at that stage.

Metro Ticket Booking – Commuter Journey Map

Figure — End-to-end commuter journey across the digitized ticketing system

1. Discovery

Field	Details
Persona Involved	Passenger
User Action	The commuter finds out about the digital booking option through station signage, the metro's mobile app, or a self-service portal link shared by station staff.
Emotional Response	Curious, slightly unsure of a new process
Current Pain Point (Manual Process)	No visibility of a fast digital alternative to physical counters; long queues at peak hours.
Digital Opportunity (ServiceNow)	An in-app banner, portal landing page, and WhatsApp entry point make the digital option immediately visible.

2. Login / Access Portal

Field	Details
Persona Involved	Passenger
User Action	The commuter opens the Service Portal (web/mobile) or the WhatsApp bot and signs in via mobile number/OTP, or continues as a guest.
Emotional Response	Neutral to positive if login is quick
Current Pain Point (Manual Process)	Manual counters need cash and physical presence; there's no account history or reusable profile.
Digital Opportunity (ServiceNow)	An OTP-based, single-sign-on-style login on the Service Portal cuts the process down to under 30 seconds.

3. Select Station & Travel Details

Field	Details
Persona Involved	Passenger
User Action	The commuter fills in the Service Catalog item, selecting the source station, destination station, passenger type (General/Student/Senior Citizen), and number of tickets.
Emotional Response	Focused, expects clarity and speed
Current Pain Point (Manual Process)	Manual counters rely on verbal communication and paper maps, so station-name errors are common.
Digital Opportunity (ServiceNow)	Catalog client scripts and station reference data automatically validate routes and block invalid combinations.

4. Fare Review

Field	Details
Persona Involved	Passenger
User Action	The system works out the fare on the spot using distance/zone logic and passenger-category discounts, and shows a clear fare breakdown before payment.
Emotional Response	Reassured by transparency
Current Pain Point (Manual Process)	Fare disputes are common at manual counters due to unclear or error-prone calculation.
Digital Opportunity (ServiceNow)	The automated fare logic script guarantees pricing that is consistent, auditable, and free of manual error.

5. Payment

Field	Details
Persona Involved	Passenger
User Action	The commuter pays via UPI, debit/credit card, or a mobile wallet, integrated through the Flow Designer payment sub-flow.
Emotional Response	Confident, values cashless convenience
Current Pain Point (Manual Process)	Cash-only counters slow throughput and cause change-related delays.
Digital Opportunity (ServiceNow)	Offering several digital payment rails drives adoption and speeds up transaction completion.

6. QR Ticket Generated

Field	Details
Persona Involved	Passenger
User Action	Once payment succeeds, the Flow Designer workflow instantly generates a digital ticket carrying a unique QR code, delivered in-app and by notification.
Emotional Response	Delighted by instant fulfillment
Current Pain Point (Manual Process)	Paper tickets can be lost, damaged, or forgotten; getting a reprint means another queue.
Digital Opportunity (ServiceNow)	The QR ticket is stored digitally, always retrievable, and needs no paper at all.

7. Travel & Gate Validation

Field	Details
Persona Involved	Passenger, Station Manager
User Action	The commuter scans the QR code at the Automated Fare Collection (AFC) gate, and the Station Manager's console reflects the validation status in real time.
Emotional Response	Smooth, fast entry builds trust
Current Pain Point (Manual Process)	Manual ticket checks at gates are slow and can lead to disputes over validity.
Digital Opportunity (ServiceNow)	Instant QR validation cuts gate dwell time and gives station managers real-time visibility.

8. Feedback / History

Field	Details
Persona Involved	Passenger, Metro Operations Team
User Action	The commuter can view their booking history, raise a support request for issues, or leave feedback; Metro Operations reviews the aggregated usage analytics.
Emotional Response	Satisfied; feels heard
Current Pain Point (Manual Process)	No structured channel exists today to capture commuter feedback or travel history.
Digital Opportunity (ServiceNow)	The digital trail supports data-driven decisions on route optimization and peak-time planning.

Key Takeaways

- The journey is reduced from a multi-step manual process — queueing, cash payment, paper ticket, manual gate check — to a self-service digital flow that finishes in under two minutes.
- Every step from login onward is tracked, giving Metro Operations end-to-end visibility that today's paper-ticket system simply cannot offer.
- The most friction shows up at legacy touchpoints — queueing, handling cash, disputed fares — all of which the automated fare logic and QR-based validation directly resolve.
- Station Managers and IT Admins are also stakeholders in this journey: the former for real-time gate validation, the latter for platform configuration and support.
